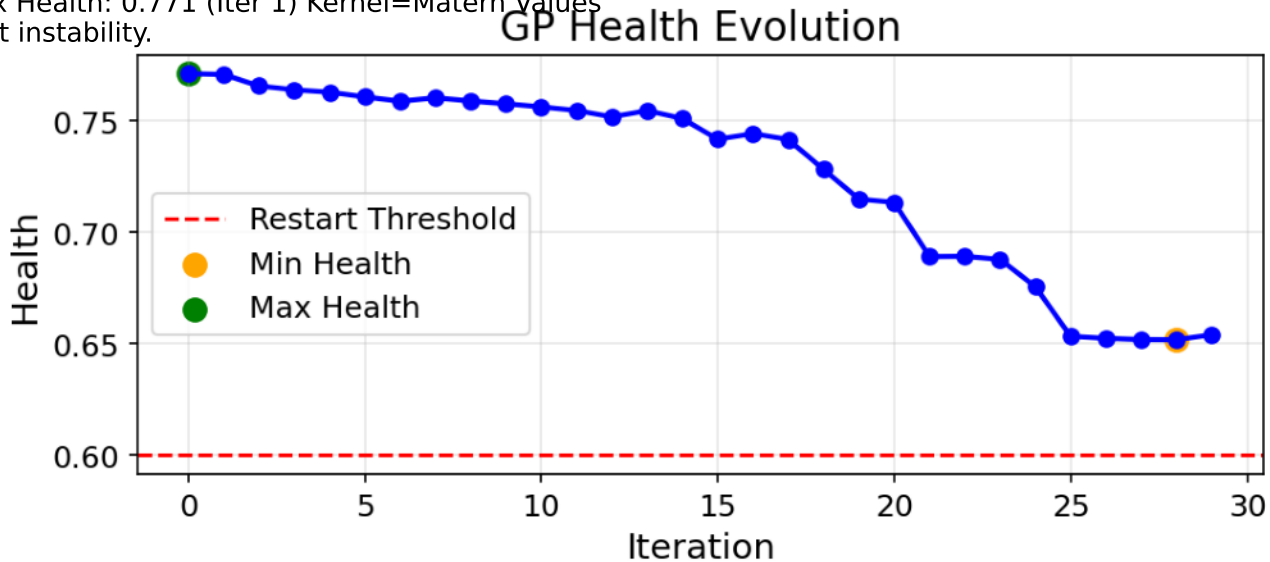
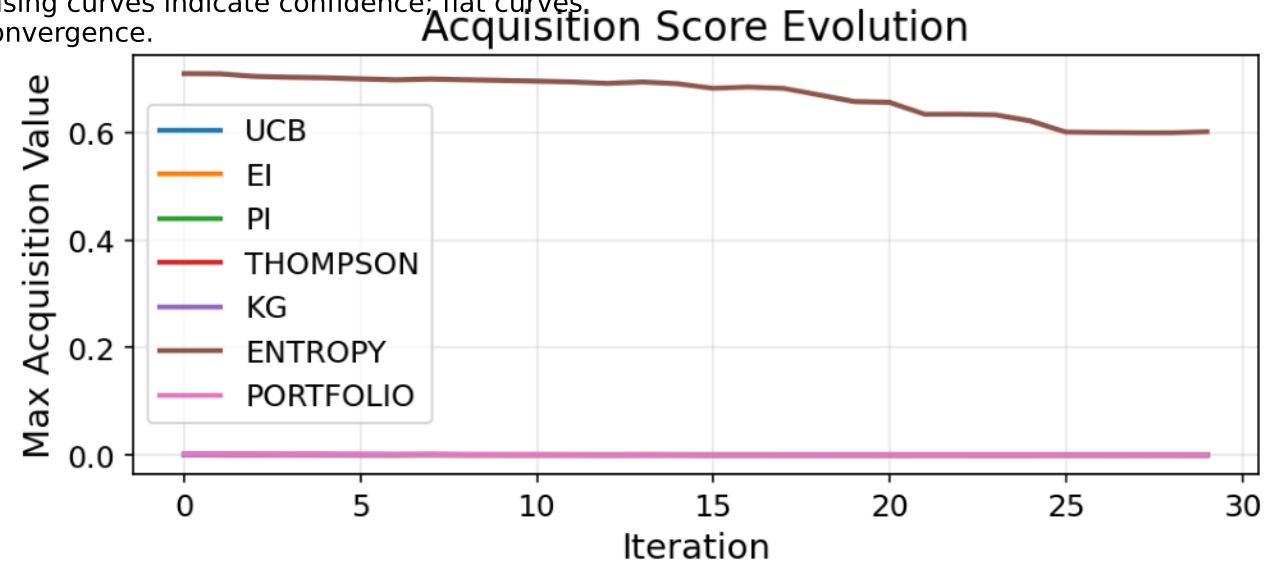
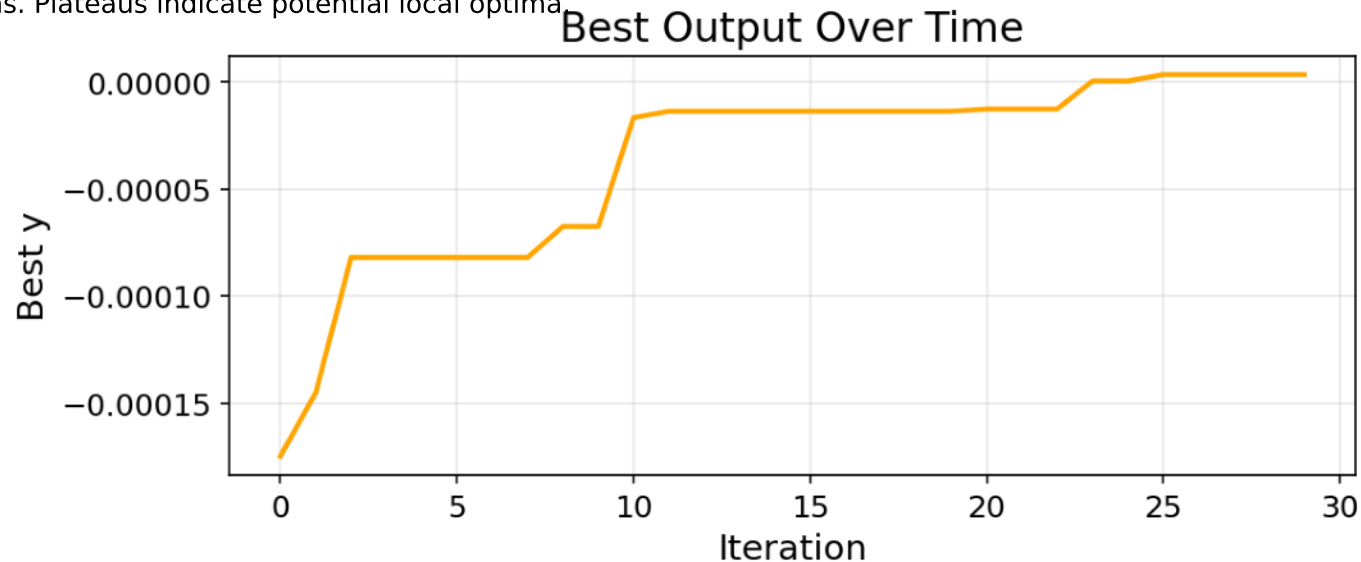
ter 29) Kernel=Matern Max Health: 0.771 (Iter 1) Kernel=Matern Values <0.6 suggest instability.



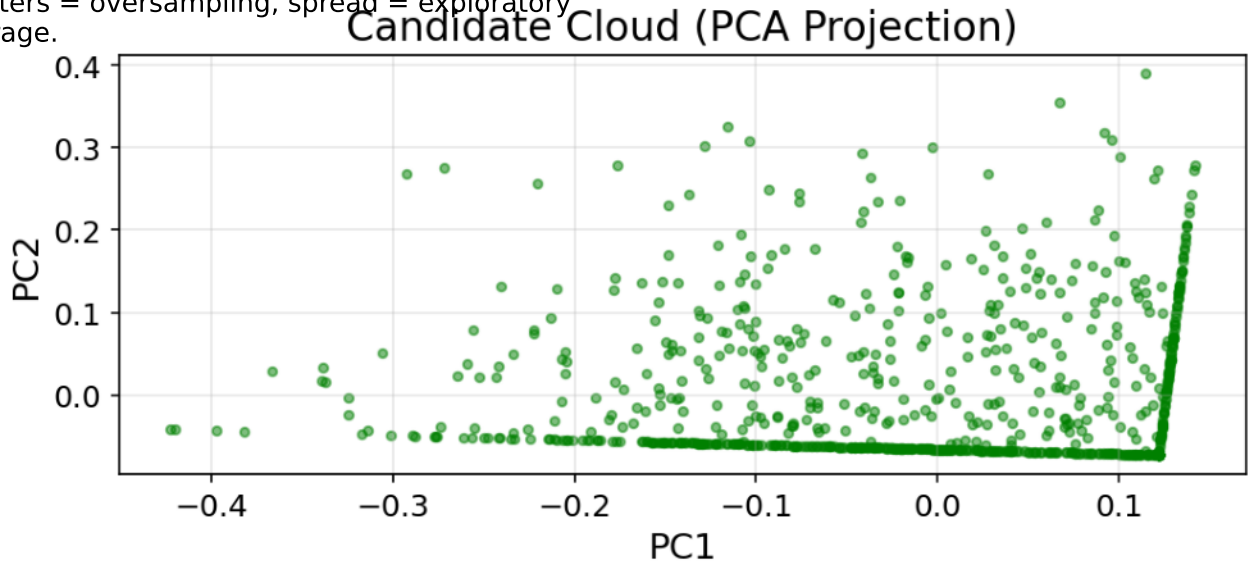
n/exploitation strength. Rising curves indicate confidence; flat curves indicate convergence.



progress over iterations. Plateaus indicate potential local optima.



n of candidate points. Clusters = oversampling, spread = exploratory coverage.



alies per iteration: Iter 1: overconfidence, heteroscedasticity Iter 2:
